Agrociencia Journal Editors

We are writing regarding our article titled "*Resistance to Leaf Rust in Cultivars and Wheat Lines from Paraguay*," published in 2023 in *Agrociencia*.

Unfortunately, due to an internal communication oversight, the manuscript was submitted by the first author before it had been reviewed and approved by all co-authors. Additionally, it appears that the journal's submission system did not notify the co-authors throughout the submission and review process, which contributed to the situation.

After publication, we identified several important errors in the text, as well as some inconsistencies in terminology that are commonly used in this area of research. With this in mind, we have prepared a revised version of the manuscript that addresses these concerns.

We kindly request that this updated version replaces the original article in order to ensure the highest quality and reliability of the published work. We truly appreciate your understanding and support, and we remain at your disposal for any further clarification.
